

Fatigue's Impact on OA

by NEWLIFEOUTLOOK TEAM

Your Energy with Osteoarthritis

Frequently, patients will report their osteoarthritis fatigue gets worse with pain, medications, weather, and sleep patterns. Take frequent rests throughout the day. You don't have to sleep but take time away from an activity that's causing you fatigue to rest. Also, try to find someone else to do an activity with, including your spouse, a child, or maybe you and someone you met with osteoarthritis could help each other out once in a while. The big take away is that whenever you start to feel yourself come up to a brick wall, stop doing what you're doing and do something that you find helps to ease your joints.

Lack of Passion
Laziness
Just Being Tired
Fake or Imagined

Fatigue Can Affect:

• Your mood	• Cognitive performance
• Physical function	• School work
• Work performance	• Community activities
• Social interaction	• Sense of self
• Family care	• Your appetite

Measuring Fatigue

The Fatigue Severity Scale (FSS) is a self-reported questionnaire used to measure your fatigue. It consists of ...

NINE Questions, each rated on a scale of 1-7

To score the Fatigue Severity Scale either add all items together (this will range from 9-63) or find the mean by adding your items together and dividing by 9 (this will range from 1-9).

In either case, the higher the number you calculate is, the more fatigued you are.

Tips for Reducing Fatigue

- Quantity & Quality of Sleep**
 - ✓ Have a regular bed time and wake up time
 - ✓ Line your bed just for sleeping
 - ✓ Do quiet activities if you're not sleepy
 - ✓ Room should be dark and quiet
